

WebVR: The Next Generation of Video Surveillance

WebVR[®] (Web Video Recorder), VideoCells' carrier-grade video surveillance platform, offers **service providers** a web-based surveillance and storage solution, providing a simple and secure method of viewing, recording and storing video. WebVR represents a value-added service, increasing monthly revenue while expanding product offerings.

WebVR keeps it simple

- **Increase recurring monthly revenue**

WebVR is a quality service that integrates into your existing network to increase your revenue.

- **Increase customer retention**

Our unique technology is secure, practical and easy to use, effectively creating customer dependency.

- **Extend your value-added services**

WebVR is a ready-to-use, carrier-grade technology that you can simply add to your existing product lineup to enhance your service portfolio.

- **Scalable technology provides flexibility**

Scalable architecture allows your system to grow seamlessly, as your user base increases.

- **Easy installation**

WebVR simplifies installation, requiring only the connection of an IP camera at the end-user's site.

- **Compatible with a wide variety of cameras**

WebVR integrates with many IP, analog and web cameras, as well as encoders. For end users with existing DVRs, WebVR can serve as additional off-site backup.

Cameras capture video

Live and recorded video feed can be viewed on your web-enabled device
